## Skill Sheet

### *Seated Spinal Immobilization -- EMR*

Skill	Pass	Needs Improvement (Please comment)
1. Takes or verbalizes body substance isolation		
2. Directs assistant to place/maintain head in neutral in-line position		
3. Directs assistant to maintain manual immobilization of the head		
4. Assesses motor, sensory, and circulatory function in each extremity		
5. Applies appropriately sized extrication collar		
6. Secures the device to the patient's torso		
7. Evaluates torso fixation and adjusts as necessary		
8. Evaluates and pads behind patient's head as necessary		
9. Secures the patient's head to the device		
10. Verbalizes moving patient to a long board		
11. Reassesses motor, sensory, and circulatory function in each extremity		
<b>Total Steps Passed</b>		
<b>Minimum steps needed to pass (assuming no critical fails below)</b>		

### Critical Criteria (Automatic Fail)

- \_\_\_\_\_ Did not immediately direct, or take manual immobilization of the head
- \_\_\_\_\_ Released, or ordered release of, manual immobilization before it was maintained mechanically
- \_\_\_\_\_ Patient manipulated, or moved excessively, causing potential spinal compromise
- \_\_\_\_\_ Device moved excessively up, down, left, or right on the patient's torso
- \_\_\_\_\_ Head immobilization allows for excessive movement
- \_\_\_\_\_ Torso fixation inhibits chest rise, resulting in respiratory compromises
- \_\_\_\_\_ Upon completion of immobilization, head is not in neutral position
- \_\_\_\_\_ Did not reassess motor, sensory, and circulatory function of extremities after immobilization
- \_\_\_\_\_ Immobilized head to the board before securing the torso

<b>Final Score (circle one)</b>	<b>Pass</b>	<b>Fail</b>
